# i3's Cloud Managed Services!

Gain deeper insights into your business like never before!

i3's CMS is your centralized platform to manage, analyze and monitor your business's operations and physical security. Using a combination of Ai, video, and data analytics software; we provide comprehensive reports and data that allow you to make informed, quick, and proactive decisions regarding your operations and loss prevention initiatives.

Business Insight

Smart ER

i3's enhanced EBR combines Ai video detection with our POS data software to provide unmatched exception reports. With the input of AP/LP leaders, we have created detailed and customized risk factor reports to meet the needs of all operators.

Foot Traffic

Advance analysis of customer behavior using standard HD IP Cameras combined with our Ai engine and POS data, you can access powerful reports on Conversion rates, average transactions, and dropped baskets remotely from your PC or mobile devices. Also, gain detailed traffic flow information through your store for better optimization.

Service times

Measure customer wait time inside the store, at the drive-thru, or curbside. Ultimately, the goal of any business is to drive employee productivity, increase sales and reduce costs. With our service time module, you get detailed insights on your store performance to help you optimize your operations and improve your bottom line.

Physical security

Video streaming

i3's Video Streaming solution allows you to securely view live and recorded video through a designated outbound gateway. Video Streaming is accessible through any web browser or mobile device, making reviewing, editing, and sharing videos an easy and seamless process.

Cloud storage

Cloud Storage allows organizations to store video from an unlimited number of cameras in the Cloud. While the decision-making process for allocating the right amount of storage can seem daunting, at i3, we aim to assist organizations needing storage redundancy and looking beyond the typical 30 to 90 days of video storage.

Health monitoring

This solution gives users immediate insight into the performance of the media server and the security hardware connected to it. All cameras and recording devices connected to your network are remotely monitored for system health and functionality.

Incident Reporting

Document any incident that may have occurred on the site using a variety of helpful reporting templates. i3's Incident Reporting allows the investigator to record all evidence, such as contact information of all individuals involved in the incident, incident time and date, location, and any other relevant data.
