

INTELLIGENT VIDEO DRIVING PROFIT

Did you know a 5-second improvement in speed of service can result in a \$10,000 increase in revenue?

Discover the benefits of i3's Ai and Machine Learning for your restaurant!

Enhance your video system

Upgrade your video system by integrating Ai and POS capabilities into your existing camera solution. Enhance asset, staff, customer, and food safety by centralizing security and streamlining visibility across all restaurant locations.

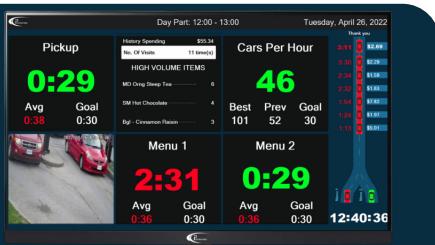

Complete customer journey

Optimize the complete customer journey by integrating i3's AI solution with POS and video. This comprehensive approach allows you to identify and enhance every aspect of the customer experience.

Ai for customer loyalty tracking

Boost your customer experience by identifying hot-spots within your store, maximize high-traffic areas, and strategically place products to drive impulse buys effectively.

Velocity drive thru timer

Optimize your drive-thru operations with i3's Velocity Timer Solution (VTS), combining Ai video technology and traditional timer technology. Gain a comprehensive understanding of your most productive area of operation to enhance efficiency and service quality.

Gamification

i3's Gamification strategy enhances up-selling by providing real-time performance data on a designated PVM across all sites. By gamifying this data, staff members are informed of their performance, encouraging positive behavior and maximizing output, ultimately leading to increased sales.

Long term cloud storage

With i3's cloud storage, users can save years of video in the cloud and avoid resolving liability issues without the relevant videos. Retrieval of these videos is quick and easy and can be done remotely from any PC and sent directly to your insurer.

These services are available via our award winning **Ai-cloud**, leveraging the power of cost-effective offsite servers to get full access to **i3Ai**.
